

Research Interests in Theoretical Neuroscience

- Theories for learning and memory from minimal neural network models
- Coarse grained network level description relevant for cognition

**How can knowledge can be learned/represented/
stored in the brain, so that it is robustly decodable
and persists throughout transformations of neural
circuits over time?**

- Other recent work: Associative memory of structured knowledge bioRxiv: 2022.02.22.481380, talk available at https://www.youtube.com/watch?v=rh_-Vh9CGbg
